

## Food Service

### 6038 Series

#### Engineering Information:

- NTC thermistor assembly
- Typical wire size: #24 to #28 AWG, coil cord
- Housing material: stainless steel
- Integral rubber stopper for inserting into bottles; provides a secure fit to prevent contamination
- Ideal for temperature monitoring in wine storage and other refrigerated applications

#### Applications:

- Monitoring temperature of liquids in cold storage
- Fermentation

#### Series Information:

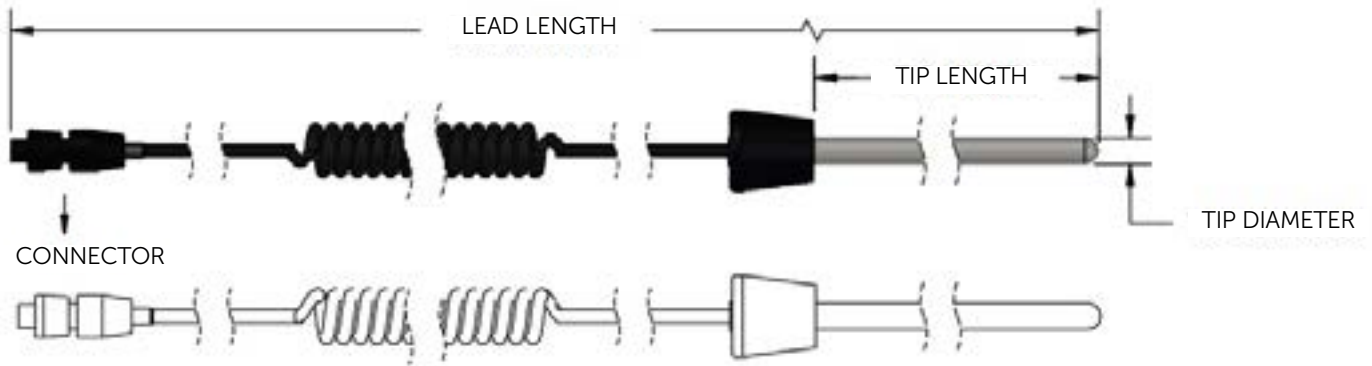

QTI's 6038 Series of bottle probes is ideal for monitoring the temperature of liquids in cold storage including those that need to be monitored for the fermentation process. This series features a sterile stainless-steel housing with an air-tight rubber stopper which prevent aeration or harmful contaminants.

QTI can customize these sensors in a variety of ways. Sensor resistance values and accuracy, as well as cable length and color are all able to be specified.

QTI is the unparalleled leader in world-class temperature sensing technology with over 40 years of proven expertise for the most demanding customers in the world. We custom-engineer the industry's most reliable temperature sensors for mission-critical applications. As a true business partner, we deliver beyond the products we make as we relentlessly pursue excellence in everything we do.
